

Dengue is a vector-borne disease caused by the dengue virus (DENV 1-4), a positive sense single-strand RNA virus of the family Flaviviridae. It is transmitted by the bite of an infected Aedes aegypti mosquito. **Coronavirus** disease (COVID-19) is an infectious disease caused by the SARS-CoV-2 virus. Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring special treatment. However, some will become seriously ill and require medical attention.

SIMILARITIES
